

• FOR DUST WORKSPACES

Cost Optimisation Audit

Dust is moving from tier-based to usage-based billing, so what your agents cost is about to start mattering. We find where the money actually goes, set up an automated check that keeps watching every week, and teach your team to build workflows that don't run up the bill.

01 · THE RESULTS

100+

agents reviewed across one workspace and 35 people

NEXIO PROJECTS ENGAGEMENT · JULY 2026

-65%

cut in spend, mapped out action by action

4x

more agent work for the same monthly budget

02 · HOW IT WORKS

Five parts

Everything we build, your team keeps and can run on their own.

01 See where the money actually goes

We put a real cost against every agent in your workspace: what it costs to run, who owns it, and whether anyone still uses it. Expect surprises. At Nexio, their own internal records had missed more than a quarter of what they were really spending.

02 Fix the ten workflows eating most of the bill

A handful of workflows almost always account for the bulk of the spend. We open the ten biggest, work out where the money goes inside each one, and hand you a fix list with a number against every item, ranked from quick settings changes up to the few worth rebuilding.

03 Put the audit on autopilot

The one-off cleanup is the easy part. We set up an automated check that runs weekly and monthly and tells you what changed: which agents are getting more expensive, where usage spiked and why, which ones have quietly stopped performing as well as they used to, and where people keep asking for the same thing often enough that it deserves its own agent.

04 Teach the team to build without burning credits

The habits that make an agent expensive are learnable, and so are the ones that keep it cheap. We take your builders through what we found in your own workspace: the patterns costing you the most, how to catch them early, and how to design the next workflow so it does the same job for a fraction of the spend.

05 Agree the guardrails before anything new ships

A short checklist that runs before a new agent goes live, so the same problems don't grow back: who owns it, what it's allowed to touch, how you'll know it's working, and what happens when it isn't. Your admin runs the whole review in about thirty minutes a month.

We look at everything that costs you money: the instructions behind each agent, how agents call each other, the tools they use and how often they fail, your connected systems (CRM, Notion, Slack, HR, GitHub), what they read and how much of it, which model each step runs on, how often things fire, and whether your seats and limits still fit.

03 · THE EVIDENCE

“Vlad dove deep into how we were using Dust—identifying what we were doing wrong, what could be improved, and opportunities we hadn't considered.”

Felix Keser CEO, NEXIO PROJECTS

MEASURED ON THAT ENGAGEMENT

Up to **95% cost reduction** on the priority AI workflows. A major sync taken from **1,210 credits per run to zero**. And **40% less token usage** across agent instructions.

04 · GETTING STARTED

SCOPE	FORMAT	ACCESS NEEDED	HANDOVER
Every agent, tool and integration in the workspace	Remote · fixed price · scoped to workspace size	One admin-scoped Dust API key	First monthly review run together, then it's yours

Find out what your workspace actually costs

Bring an admin-scoped API key and thirty minutes. We'll show you the shape of your spend before you commit to anything.
